PROFESSIONAL SUMMARY

Results-driven Salesforce Architect and Technical Lead with 15+ years of enterprise CRM experience holding 8 Salesforce certifications, including 7 years of Siebel development and 8+ years of deep Salesforce expertise. Proven track record architecting global Service Cloud solutions for 40,000+ agents and delivering AI-powered enhancements that measurably improve customer satisfaction and operational efficiency. Adept at bridging business strategy with technical execution, partnering with various stakeholders, and mentoring high-performing engineering teams.

CORE COMPETENCIES

>> Salesforce Architecture & Design
>> Salesforce Development
>> Salesforce Service Cloud
>> GenAI Integration
>> Strategic Problem Solving
>> Performance Optimization
>> Siebel Development & Open UI
>> Cross Functional Partnerships
>> Team Leadership & Mentoring

TECHNICAL SKILLS

Salesforce Platform	Apex, LWC, Aura Components, Flows, Async Apex, Process Builders and Workflows(legacy)
Salesforce Service Cloud	CTI/Telephony (InGenius/Avaya), Live Agent, Messaging, Case Management, Omni-Channel Routing, Entitlements, Milestones, Knowledge,
Integration & Events	REST API, SOAP API, Named Credentials, Platform Events, Change Data Capture (CDC), OAuth 2.0
AI & Emerging Tech	Salesforce Agentforce, GenAI-LLM integration, Python, Agentic AI concepts
Legacy CRM	Siebel 7.x / 8.x, Siebel Open UI, eScript, Workflows, Business Services, Integration Objects, Task-Based UI
Database / Query	SOQL, SOSL, SQL

PROFESSIONAL EXPERIENCE

Principal Software Engineer – Salesforce Architect & Technical Lead | Dell International Services, Bangalore, *Nov 2016 – September 2020,* Remote *September 2020 – till date*

ARCHITECTURE & PLATFORM LEADERSHIP

- Architected a global Salesforce Service Cloud CRM platform integrating Dell/EMC systems, enabling 40,000+ agents to deliver seamless omni-channel support across Chat, Email, Voice channels.
- Adopted a hands-on architecture leadership role, defining and presenting Salesforce solutions to executives and working closely with enterprise architects to align with strategic goals.
- Led CRM platform migration from Siebel to Salesforce, re-engineering legacy service flows into modern Service Cloud capabilities (Omni-Channel, Knowledge, Entitlements, Milestones).
- Defined governance frameworks for metadata management, ensuring consistent reuse of permission sets, profiles, custom objects, and automation components across the org.

KEY ACHIEVEMENTS & QUANTIFIED IMPACT

- Led onboarding of 25,000+ global tech support and customer care agents onto Salesforce Live Agent, reducing case resolution time by 20% and improving customer engagement consistency.
- Orchestrated enterprise-wide onboarding of 40,000+ agents onto InGenius CTI, integrating Avaya, IVR, call routing, call recording, secure payment systems into a unified voice support experience.
- Spearheaded implementation of Live agent Chat with real time Chat Translation, driving a 2% increase in CSAT and a saving of $3.5M/year.
- Architected the integration to GenAI models for automated summarization of chats, calls, cases and auto email compositions accelerating agent response times by 30%.
- Developed a Multi-Select Routing Engine (MSRE) framework to automate case assignment across omni-channel case creation, improving accuracy and efficiency of case distribution.

SALESFORCE DEVELOPMENT & AUTOMATION

- Developed and maintained Apex Classes, Triggers, Batch, Queueable, and Scheduled jobs ensuring optimal performance, bulkification, and compliance with governor limits.
- Built reusable Lightning Web Components (LWC) and Aura Components delivering dynamic, high-performance UIs integrated with Apex, LDS, and wire services; migrated legacy Aura Components to LWC.
- Designed scalable data models including custom objects, lookup/master-detail relationships, record types, formula fields, and advanced validation rules for complex business workflows.
- Automated business processes using Record-Triggered Flows, Screen Flows, Sub-flows, invocable Apex, fault paths, and dynamic UI screens; migrated legacy Process Builder/Workflow Rules to Flows.
- Created secure, high-performance REST/SOAP API integrations leveraging Named Credentials, callouts, Platform Events, and Change Data Capture (CDC) for real-time communication.

PERFORMANCE OPTIMIZATION

- Optimized Apex logic through bulkification, selective queries, caching strategies, and asynchronous patterns, improving transaction performance and staying within governor limits.
- Refactored poorly performing SOQL/SOSL queries, redesigned relationships, and improved query selectivity—reducing query time and preventing runtime limits.
- Enhanced Lightning Web Component (LWC) performance using efficient reactive variables, imperative Apex calls, lazy loading, and Lightning Data Service for faster UI rendering.
- Improved Service Console performance by restructuring Record-Triggered Flows, eliminating redundant logic, and optimizing branching for faster case handling.
- Introduced Platform Cache and optimized repeated data retrieval patterns, significantly lowering API calls and improving end-user experience.
- Conducted performance audits on customer workloads, identifying bottlenecks in Apex, integrations, and Flows; delivered targeted fixes that improved system stability.
- Optimized integration throughput using queueable/batch patterns, Platform Events, and improved retry & error-handling logic for high-volume systems.
- Improved overall org performance by consolidating automation, restructuring triggers, reducing DML statements, and removing unused Apex/metadata components.

SERVICE CLOUD DELIVERY

- Designed and configured Omni-Channel routing for intelligent distribution of cases, chats, and voice interactions; built scalable email-to-case and web-to-case frameworks with automated triaging and routing.
- Implemented Salesforce Knowledge with bulk tagging of different taxonomies to Knowledge articles.
- Customized Service Console with Lightning pages, highlights panels, utility items, and Quick Actions to optimize agent productivity.
- Implemented Live Chat, Messaging, and Chatbots using Omni-Channel and custom LWC/Apex; integrated CTI/Telephony (Genesys/other providers) enabling click-to-dial, screen pops, call logging, and voice interaction tracking.

SECURITY, QUALITY & TEAM LEADERSHIP

- Configured profiles, permission sets, roles, OWDs, sharing rules, FLS, and permission boundaries to ensure a secure, scalable access model across global business units.
- Led code reviews and performance guardrails, systematically identifying and driving remediation of technical debt; reduced org instability by optimizing slow-running queries and refactoring Apex.
- Mentored junior developers on Apex, LWC, Flows, and deployments, accelerating team maturity and delivery speed across an 8-member feature team.
- Delivered multiple cross-functional initiatives with on-time, high-quality releases and zero escalations, partnering closely with Product, QA, and interlock teams.

Senior Software Engineer – Siebel Open UI Developer | Accenture, Bangalore *Aug 2014 – Nov 2016*

- Led a high-performing feature team of 8 members, overseeing task delegation, technical delivery, and Agile ceremonies including Backlog Refinement, Sprint Planning, and Daily Scrums.
- Applied deep expertise in Siebel Open UI Architecture to build responsive modern interfaces using HTML5, CSS3, JavaScript, and jQuery with Presentation Models (PM) and Physical Renderers (PR).
- Administered Manifest Files and Manifest Expressions mapping custom JS/CSS files to Siebel objects; dynamically injected HTML elements into the Open UI layer while maintaining HI compatibility.
- Configured Business Components (BCs), Business Objects (BOs), Integration Objects (IOs), Workflows, Task-Based UIs (TUI), and Business Services; leveraged advanced browser debugging to resolve complex Open UI defects.

Senior Systems Analyst – Siebel Developer | Speridian Technologies, Bangalore*Mar 2014 – Aug 2014*

- Engineered custom Open UI solutions used as benchmark demonstrations for prospective global clients.
- Leveraged expertise in eScript and Workflows to deliver rapid-turnaround enhancements and high-priority system fixes; stabilized multiple project environments by diagnosing and resolving critical defects.

Software Dev Analyst – Siebel Developer | Dell International Services, Bangalore *Nov 2012 – Jan 2014*

- Authored comprehensive Technical Design Specifications (TDS) and led peer review sessions; appointed to a SWAT team for code optimization and refactoring, reducing system crashes by 30%.
- Translated complex business needs into technical solutions using configuration, eScripting, and Siebel Workflows; engineered diverse applet types and designed complex Workflows and Task-Based UIs.
- Managed database-level changes including new tables, column extensions, custom indexes, and user keys; drafted exhaustive unit test cases and resolved defects across DIT, SIT, and UAT phases.

Software Engineer – Siebel Developer | Tech Mahindra Ltd, Bangalore *Apr 2010 – Nov 2012*

- Engineered complex UI components including List/Form Applets, Pick Applets, MVGs, Shuttle Applets, Views, and Screens; implemented sophisticated Product eConfigurator solutions.
- Executed end-to-end Siebel upgrade tasks (pre-upgrade prep to post-upgrade validation), resolved SRF compilation errors, and optimized Workflow Monitor Agents post-migration.
- Resolved high-priority production incidents through deep-dive log analysis; managed LOVs, Responsibilities, Views, Users, Positions, and Runtime Events.

EDUCATION

B. Tech – Information Technology | Sree Vidyanikethan Engineering College (JNTUA) *2009*

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

Salesforce Platform Developer I | Salesforce Platform Developer II | Salesforce Certified Agentforce Specialist | Salesforce Certified Application Architect | Salesforce Certified Platform Data Architect | Salesforce Certified Platform Sharing and Visibility Architect | Salesforce Certified Platform App Builder | Salesforce Certified Platform Foundations
